

10kW outdoor cabinet for microgrids in base stations is more efficient

Overview

Does a 5G base station microgrid photovoltaic storage system improve utilization rate?

Access to the 5G base station microgrid photovoltaic storage system based on the energy sharing strategy has a significant effect on improving the utilization rate of the photovoltaics and improving the local digestion of photovoltaic power. The case study presented in this paper was considered the base stations belonging to the same operator.

What is a photovoltaic storage microgrid?

Photovoltaic power generation is used as a distributed power source, and the backup power storage and photovoltaic power form a photovoltaic storage system. The photovoltaic storage microgrid structure of the grid-connected 5G base station is shown in Fig. 1. Fig. 1. Microgrid control architecture of a 5G base station.

How 5G base station microgrid power backup works?

The charging and discharging actions of energy storage meet the requirements of various 5G base stations for microgrid power backup. During the low electricity price period, the 5G base station microgrid purchases electricity from the grid to meet the power demand of the base station.

Do 5G base station microgrids contribute to a delayed power grid upgrade?

With respect to the power grid, the participation of the 5G base station microgrids in the power grid interaction introduces the benefits of delayed power grid upgrading. In this study, only typical days are considered, and the typical days of four quarters are selected to represent the entire year.
