Overview

What is Google's 1 MW it rack?

At the recent Open Compute Project Foundation (OCP) Summit in Dublin, one of the major announcements was Google's unveiling of the 1 megawatt (MW) IT Rack. As AI continues to disrupt the IT landscape, it is also pushing the boundaries of the physical infrastructure in the data center.

Are 1 mw racks coming soon?

When Flex President Chris Butler started talking about the imminent reality of 1 megawatt (MW) racks in an interview this week, it sounded like an echo. That's because just two days before LiquidStack's Head of Strategy Angela Taylor mentioned the same thing. According to Butler, they're coming soon.

Could '1 megawatt racks' reduce energy losses?

The Open Compute Project Foundation (OCP) is spearheading a radical redesign of data center power architecture to support AI's explosive growth, including the concept of "1 Megawatt racks" that could reduce energy losses from 40% to just 7%.

What needs to change to enable 1 mw racks?

Cooling systems aren't the only thing that needs to change to enable 1 MW racks. Power supply systems are another critical component. Flex is currently working on 400 volt (V) direct current (DC) systems, and Butler said it's already eyeing 800V DC and even 1500V DC for the future.
