

Canadian air energy storage project

Overview

When will cache power's compressed air energy storage project start?

The project has received all major regulatory approvals, with early construction to begin in Q4 2025. “EllisDon is proud to invest in and partner with Cache Power on Canada’s first commercial scale Compressed Air Energy Storage facility,” said Joey Comeau, Chief Operating Officer & Executive Vice President, Capital, EllisDon.

When did energy storage start in Canada?

The first energy storage project in Canada, the Sir Adam Beck Pump Generating Station, came online in 1957. However, the next project did not come online until 2013. There are three main types of energy storage currently commercially available in Canada:.

What is compressed air energy storage (CAES)?

In Compressed Air Energy Storage (CAES), air is compressed and stored in underground structures like mines, aquifers, salt caverns or old oil reservoirs, or in aboveground pressure vessels. When electricity is needed, the air is released to power a turbine and generate electricity.

What is the fastest growing energy storage technology in Canada?

BESS is the fastest growing energy storage technology in Canada and is also the dominant storage technology in terms of capacity and number of sites. All but four projects proposed to be commissioned by 2030 are battery storage, with two CAES and two PHS projects also proposed.
