

# Charging pile energy storage investment

## Overview

---

How does the energy storage charging pile's scheduling strategy affect cost optimization?

By using the energy storage charging pile's scheduling strategy, most of the user's charging demand during peak periods is shifted to periods with flat and valley electricity prices. At an average demand of 30 % battery capacity, with 50-200 electric vehicles, the cost optimization decreased by 18.7%-26.3 % before and after optimization.

How effective is the energy storage charging pile?

The energy storage charging pile achieved energy storage benefits through charging during off-peak periods and discharging during peak periods, with benefits ranging from 699.94 to 2284.23 yuan (see Table 6), which verifies the effectiveness of the method described in this paper. Table 6.

How to reduce charging cost for users and charging piles?

Based Eq. , to reduce the charging cost for users and charging piles, an effective charging and discharging load scheduling strategy is implemented by setting the charging and discharging power range for energy storage charging piles during different time periods based on peak and off-peak electricity prices in a certain region.

How a charging pile is developing in China?

Under the development of new energy vehicles, especially the tram policy of taxi and online car hailing, has promoted the industrial development of charging piles . China's public charging piles mainly rely on charging owners using charging services to make profits, and many charging pile manufacturers have successfully on the market.

4.2 A Breakthrough Analysis on the Development of the Charging Pile Industry in China  
5 "Transformation" of Charging Pile under the Background of "New Infrastructure"  
Compared with the past, charging piles under the background of "new infrastructure" policy have been given with "new" connotation and some "new" changes. The essence of "new infrastructure" is digital infrastructure. In the future, the charging pile will no longer only have a simple charging function, nor a simple equipment and isolated monomer, b
