

Communication power supply cabinet AC DC integrated bidding spot goods

Overview

What is AC/DC power rectification?

AC/DC power rectification using modular SMRs offers redundancy and expandability. Integrated DC distribution eliminates the need for a separate distribution panel. Battery charging with battery circuit breaker included. Provides complete DC uninterruptible power supply (UPS) functionality.

What is a DC power system?

A complete DC power system with distributed power output and battery backup all included in one unit. Two types available: Type 1 which combines DC power and batteries into a single cabinet, and Type 2 where batteries are separate (for larger systems). Primary DC output voltages in 24V, 48V, 125V, or 240V classifications.

What is a preferred power supply architecture for DSL applications?

A preferred power supply architecture for DSL applications is illustrated in Fig. 2. A push-pull converter is used to convert the 48V input voltage to +/-12V and to provide electrical isolation. Synchronous buck converters powered off of the +12V rail generate various low-voltage outputs.
