

Cuba surveys energy storage power stations

Overview

What types of energy systems are covered in Cuba?

Coverage includes generation and storage systems, renewable energy installations (hydropower, solar PV, wind, biomass, ocean, and solar thermal), electrical grid history and characteristics, and an analysis of Cuba's electrical energy resiliency.

What is the energy consumption column in Cuba?

Electricity production of Cuba in 2015 sorted by technologies and resources, the energy consumption column corresponds to the primary resources needed to produce the amount of electricity in the column called electricity production with the current Cuban energy system. Thermoelectric power plants have an installed capacity of 2.59 GW.

Is Cuba a vulnerable energy system?

Cuba is currently in a vulnerable energy situation since it strongly depends on the importation of fossil energy. Strategies based on intermittent RES (solar and wind) can reduce this vulnerability, but the introduction of this type of source impacts the energy system's characteristics and aspects at a country/regional scale.

Can Cuba produce electricity from renewable sources?

Cuba has a high electrification rate and a highly distributed electricity generation system and could facilitate realization of the potential, resulting in electricity production of 26 TWh from renewable sources annually .
