

# Energy storage application of new energy charging stations

## Overview

---

Can energy storage be used for charging a new energy station?

During peak periods of electricity prices from 10:00 am to 12:00 am and 6:00 pm to 9:00 pm, energy storage is used for discharge; at other times, energy storage can be used for charging. After optimization, the energy output of new energy station is shown in Fig. 3, energy output values are given by Table 2.

What is a new energy station?

New energy stations include renewable energy sources such as wind power and photovoltaic, gas turbine power generation, and energy storage system charging and discharging. During the normal operation of new energy stations, each equipment must meet its own constraints.

How energy storage system model is related to new energy stations?

The establishment of an energy storage system model is related to the revenue of new energy stations. This paper starts from the energy storage revenue model and energy storage cost model, and refines the energy storage system model.

Why do we need public charging and swapping stations?

Through continuous technological innovation and system optimization, public charging and swapping stations will better serve new energy vehicles, promote the transformation of energy structure, and construct a green and low-carbon society. In public charging and swapping stations, solar and wind power are common renewable energy sources.
