

# Ethiopia s energy storage needs decrease

## Overview

---

Can Ethiopia supply a larger economy than today?

Ethiopia could supply a much larger economy than today in the AC, using only twice the energy, were it to diversify its energy mix and implement efficiency standards. In the AC, this diversification comes about as a result of a substantial expansion of geothermal energy along with increased use of oil within industry and for cooking. IEA.

Why is energy demand increasing in Ethiopia?

To meet the needs of its growing population, Ethiopia remains a large producer of cement causing energy demand to increase significantly in both scenarios. Ethiopia currently has an electricity access rate of 45%, 11% of its population already have access through decentralised solutions.

How much energy does Ethiopia use?

The review shows that energy supply and consumption in Ethiopia are dominated by bioenergy (88%) and by households (88%), respectively. Electricity barely accounts for 3% of the total energy supply although its generation has increased by more than four times between 2004/05 and 2018/19.

How can the outlook contribute to the development of Ethiopian energy sector?

The Outlook has been developed in close cooperation with all partners with strong commitment, openness and good discussions. It is the ambition that the Outlook in the same way can contribute to the development of the Ethiopian energy sector. 1. Executive Summary

## Ethiopia s energy storage needs decrease

### Pumped Hydro

easily replace backup diesel generators used as a backup during a blackout. Moreover, it showed the Policy barrier for energy storage in the Et iopian National Energy Policy proclaimed in 1994 ...
