

German modular battery cabinet 800mm deep

Overview

What is a battery line Safety Cabinet?

The BATTERY line safety cabinets are specially constructed to meet the high requirements for the safe storage and charging of lithium-ion batteries, which can self-ignite in the event of malfunction.

Which accumulator batteries are included in the cabinets covered by the technical specification?

The cabinets covered by the technical specification have been designed to contain the hermetic lead-acid electric accumulator batteries.

Why should you choose a battery cabinet?

Our battery cabinets are sophisticated and offer modular solutions that can withstand even temperatures and earthquakes when it matters. VENTILATION: Our cabinets are specially designed for the use of stationary batteries. One important factor here is ventilation, both for cooling and for the removal of hydrogen (H₂).

How to install ups cabinets in a room?

The cabinets must be installed in rooms as close as possible to the UPS, dry and with good ventilation, they do not require floors with fireproof coatings. The kg/m² capacity of the floor where the equipment is installed must be considered, in view of the high weight of the cabinets.
