

Greek energy storage layout plan

Overview

The draft plan presented on February 21 ups the target from the initially planned 1.5 GW and far exceeds any deployment scenarios considered in the past. The government now aims for 2.65 GW of battery projects on the transmission grid and a further 900 MW on the distribution grid.

The draft plan presented on February 21 ups the target from the initially planned 1.5 GW and far exceeds any deployment scenarios considered in the past. The government now aims for 2.65 GW of battery projects on the transmission grid and a further 900 MW on the distribution grid.

A draft ministerial decision envisages the installation of 3.55 GW of standalone battery energy storage systems which will be granted priority connection to the transmission or distribution grid and operated on a merchant basis without subsidy support. From ESS News The Greek Ministry of Energy and.

The much-awaited ministerial decree for zero-subsidy standalone battery systems has been published in Greece. So far, Greece has provided support to 900 MW of standalone storage projects under three previous auctions. The new plan, prepared by the Ministry of the Environment and Energy, calls for.

This has made Battery Energy Storage Systems (BESS) and pumped hydro projects indispensable for ensuring grid reliability and enabling further renewable integration. In response, the Greek government has introduced one of the most ambitious storage plans in Southeast Europe. According to the.

While Greece currently has virtually no utility-scale battery storage capacity installed, the country's project pipeline points to explosive growth in the coming years. The rapid growth of Greece's storage market is driven by a combination of factors, including Greece's heavy reliance on fossil gas.

This article highlights key steps recently taken by the Greek State as regards the legal/regulatory framework and appropriate State aid schemes, to kickstart electricity storage activity and allow for an efficient and timely development of facilities. Currently there are four (4) storage plants.

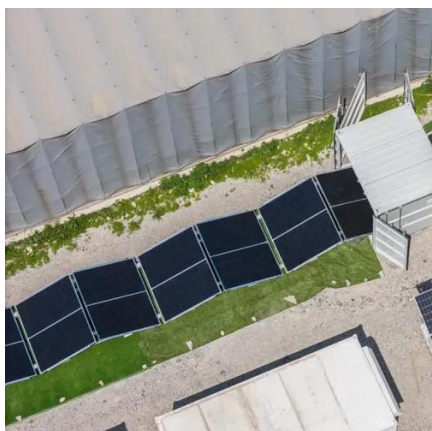

Presenting to the Special Standing Committee on Environmental Protection of the

Hellenic Parliament on June 25, 2025, Nikos Mantzaris, policy analyst and co-founder of The Green Tank, highlighted Greece's remarkable progress in renewable energy (RES) and the urgent need to scale up storage.
