

How long is the life of solar battery cabinet lithium battery pack

Overview

How long do solar batteries last?

The life expectancy of a solar battery depends on several factors—what kind of battery you have, how you use it, where it's stored, and how well it's maintained. While lead-acid batteries may only last a few years, lithium options can easily reach 10 to 15 years or more with proper care.

How long should a battery stay on the shelf?

Here are some recommendations for lithium ion battery shelf life and storage that will maximize the battery life span. Don't leave the batteries on the shelf for a very long period, say 6 months, as the batteries self-discharge as they sit and it affects their capacity.

How long does a battery last?

Lead-acid batteries (flooded or sealed): These are the most traditional type and also the shortest-lived, typically lasting 3 to 7 years. They're more affordable upfront but require regular maintenance and don't hold up as well over time. When people talk about battery lifespan, they're often referring to "cycle life."

How long does a lithium battery last?

For example, a lithium battery might be rated for 5,000 cycles. If you cycle it once a day, that gives you roughly 13–14 years of use. But if you're only cycling it every few days, you could stretch that out even further. The depth of each cycle also matters.
