

# Is it safe to store lead-acid batteries in cabinet

## Overview

---

How do you store a lead acid battery indoors?

Storing lead acid batteries indoors requires specific conditions to ensure safety and longevity. Proper storage involves keeping them in a cool, dry, and well-ventilated area, away from direct sunlight and heat sources. Lead acid batteries contain toxic materials and can emit harmful gases if damaged or overcharged.

Are lead acid batteries safe?

Ensure the environment is well-ventilated. Monitor the battery for leaks or swelling. Avoid storing lead acid batteries in high-temperature areas, as heat can accelerate their degradation. In summary, lead acid batteries can be safe if used correctly. Understanding and managing the associated risks are key components of their safe operation.

What temperature should a lead acid battery be stored?

The recommended storage temperature for most batteries is 15°C (59°F); the extreme allowable temperature is -40°C to 50°C (-40°C to 122°F) for most chemistries. You can store a sealed lead acid battery for up to 2 years.

How long can a lead acid battery last?

You can store a sealed lead acid battery for up to 2 years. Since all batteries gradually self-discharge over time, it is important to check the voltage and/or specific gravity, and then apply a charge when the battery falls to 70 percent state-of-charge, which reflects 2.07V/cell open circuit or 12.42V for a 12V pack.
