

Mali 3 2 billion energy storage project

Overview

What is the current situation of energy supply in Mali?

Current situation of energy supply in Mali Currently, the country's national primary energy and electricity systems are dominated by biomass and hydropower with 78% and 50% respectively (AfDB 2015, SE4ALL 2019). Such dependency would become a particular problem in light of climate impact on energy resources.

What is the energy strategy of Mali?

The general energy strategy of Mali focuses on the development of local resources such as hydropower and solar energy in order to reduce petroleum imports. Objectives of the National Energy Policy regarding renewable energy are:
Promotion of RE.

How a decentralized energy supply works in Mali?

The small size and dispersed locations of villages in Mali for a long time made off-grid decentralized mechanical and electric energy supply the only viable option. A multifunctional platform consists of a 10-hp diesel engine that, as desired, can power a mill, a generator, a pump or other devices mounted on the same rail.

Why does Mali need more energy?

Mali, a developing country is facing an increasing demand of energy as result of its growing population and economy. The energy supply systems in the country rely heavily on traditional biomass (firewood and charcoal) accounted for about 78% of national energy consumption.
