

Mobile solar cooling system design

Overview

This paper proposes a portable solar-powered cooling system (SPCS) based on a foldable-flower mechanism and wireless power transfer (WPT) technology. The proposed system consists of three main parts: a solar foldable-flower module (SFFM), an energy transfer module, and a temperature.

o are new to each technical aspect. The most important topics relevant to the engineering behind solar cold rooms have been compiled in a compact and easily understandable form. The handbook is accompanied by Excel-based design toolboxes to guide the relevant cold room technologies available. This work.

Abstract — This study proposes a novel solar-based portable refrigerator system utilizing a Peltier module for efficient cooling. The system is designed to provide a sustainable and energy-efficient cooling solution for remote and off-grid locations. The Peltier module acts as the main cooling.

The aim of this project is to design a portable solar thermoelectric refrigerator for people living in remote areas, or outdoor applications where electric power supply is absent. The design of the solar-powered refrigerator based on the principle of the thermoelectric module to create a hot side.

This study presents a novel Mobile Solar Cooling System (MSCS) designed to enhance the cold chain for leafy vegetables by leveraging solar energy for sustainable and cost-effective refrigeration. The MSCS maintained an average storage temperature of $9 \pm 4^\circ\text{C}$ and relative humidity of $85 \pm 10\%$.

The knowledge hub for solar cooling and air conditioning within the IEA SHC Programme contains a number of new reports. One reviews climate conditions and typical applications for solar cooling. Another looks at technical and non-technical lessons learned, based on a survey of solar cooling experts.
