Preparing for the 2nd annual Moldova Energy Forum, organised by The Voice of Renewables in Chisinau on 10 June 2026, we present a comprehensive summary of the results of the first auction and the outlook for the upcoming round. The inaugural 2025 renewable energy auction attracted significant.

For example, the energy company MoldovEnergy has installed over 50 fast chargers in Chişinău alone, increasing electric car charging network Moldova availability by 40% in just two years. Experts say this collaborative approach accelerates the green energy transition Moldova dreams of by combining.

The facility will produce equipment for charging stations and energy storage systems for electric vehicles, with a strategic export orientation towards the European market. This investment represents a major Chinese project in the Republic of Moldova in recent years, exceeding by more than 20 times.

The Republic of Moldova is importing almost 100% of fossil energy resources (gas, gasoline, diesel, LPG.) and about 70% of its electricity demands. To transition towards a carbon-neutral future, the Republic of Moldova should untap its renewable energy potential and invest in renewable energy.

With only 8% of electricity currently generated from renewable sources (National Bureau of Statistics, 2023), the country requires energy storage systems to stabilize grids and maximize clean energy adoption. "Energy storage isn't just technology - it's Moldova's key to energy independence." - EK.

Moldova has made major strides in electric and hybrid transport, registering over 64,000 such vehicles since 2018, according to the National Centre for Sustainable Energy (NCSE). This includes 6,612 electric and 57,879 hybrid vehicles, CE Report quotes MOLDPRES In the first quarter of 2025 alone.
