

# Price of standard power scale energy storage cabinet in india

## Overview

---

Currently, the cost of battery-based energy storage in India is INR 10.18/kWh, as discovered in a SECI auction for 500 MW/1000 MWh BESS. The government has launched viability gap funding and Production-Linked Incentive (PLI) schemes to make battery storage affordable.

Currently, the cost of battery-based energy storage in India is INR 10.18/kWh, as discovered in a SECI auction for 500 MW/1000 MWh BESS. The government has launched viability gap funding and Production-Linked Incentive (PLI) schemes to make battery storage affordable.

ems (Standalone ESS) emerging as a key enabler. As the country rapidly scales up variable renewable energy (VRE), Standalone ESS offers a dispatchable solution to address the intermittency of renewables, su andalone ESS functions as an independent asset. Utilities, grid operators or third-party.

India's battery energy storage capacity will see a massive jump in 2026. Capacity is expected to rise nearly ten times from 2025 levels. This surge is driven by a significant number of projects moving from tendering to execution. The year 2026 marks a critical point for the industry. Projects.

ation. Recent energy storage auctions in India reveal record-low prices, with unsubsidized standalone battery storage bids at 2.8 lacs/MW/month and solar+storage bids at 3.1–3.5 I R/kWh. Our analysis, based on implied solar and storage costs from these bids and bottom-up global cost estimates.

By 2030, the LCOS for standalone BESS system would be Rs 4.1/kWh and that for co-located system would be Rs 3.8/kWh. This implies that adding diurnal flexibility to ~20-25% of the RE generation would cost an additional Rs 0.7-0.8/kWh by 2030. What is the value of energy storage in India?

How would.

Greenko won the bid at a peak power tariff rate of ₹6.12 (~\$0.08)/kWh and ReNew Power won at ₹6.85 (~\$0.09)/kWh. Many expect this tender to kickstart the commercial deployment of grid-scale storage in India. According to NITI Aayog and Rocky Mountain Institute estimates, India will account for 800.

Solar and wind power supply fluctuates, Energy storage systems (ESS) play a crucial role in smoothening out this intermittency and enabling a continuous supply of energy when needed. Thus, for sustainable renewable energy addition, concurrent growth of ESS capacity is imperative. This report. How much does energy storage cost in India?

ation. Recent energy storage auctions in India reveal record-low prices, with unsubsidized standalone battery storage bids at 2.8 lacs/MW/month and solar+storage bids at 3.1-3.5 l.

How much does a battery storage system cost in India?

In another report, the Energy Transitions Commission (ETC) projects that the levelized cost of storage systems in India will reduce from \$0.41 (~₹30.8)/kWh in 2018 to \$0.17 (~₹12.8)/kWh in 2030. The report adopts a two-pronged approach to estimate the cost of Li-ion based MW scale battery storage systems in India.

What are the latest auction results for battery energy storage in India?

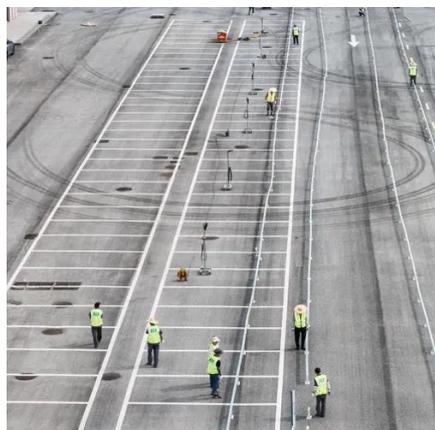

India. Specifically, recent auction results for storage have been record-breaking: the latest tender for standalone battery energy storage systems (BESS) with two hours' duration in April 2025 saw a winning bid of 2.8-2.85 lacs/MW/month, without any subsidy like the Viability Gap Funding.

Are energy storage projects being built in India?

According to a report published by the Lawrence Berkeley National Laboratory (LBNL), a large number of energy storage projects are being built worldwide, and there is a significant interest among policymakers in India as well.

## Price of standard power scale energy storage cabinet in india
