# Price quote for 19-inch server racks used in substations in Philippines

# Overview

How big is a server cabinet in the Philippines?

Understanding server cabinet sizes is crucial for optimizing your IT infrastructure in the Philippines, as dimensions are measured in Rack Units (U). Each U represents 1.75 inches or 44.5 mm of vertical space inside a cabinet, accommodating individual server racks typically 1U, 2U, 3U, or 4U high.

What is a 19 inch rack enclosure?

These cabinets conform to the 19-inch rack enclosures standard, which is the globally accepted specification for housing servers and related hardware. The vertical mounting rails within the cabinets are spaced to align with equipment racks, measured in "rack units" (U) for systematic organization.

What is a server rack?

Server racks are structures which are designed to house and organise networking equipment. Server rack enclosures are primarily used for holding servers, but they also house other network devices such as routers and cables. Server racks can be both freestanding or in wall mount form and are often used as a computer server rack or data rack.

What is a floor standing data rack?

Floor Standing: These are full-sized data rack solutions offering higher capacity and often feature mobility options like casters for easier repositioning. They are the go-to choice for server rooms, data centers, and larger IT installations where significant equipment housing is required.
