

# Price quote for grid-connected mobile energy storage units for European farms

## Overview

---

Recent industry analysis reveals that lithium-ion battery storage systems now average €300-400 per kilowatt-hour installed, with projections indicating a further 40% cost reduction by 2030.

Recent industry analysis reveals that lithium-ion battery storage systems now average €300-400 per kilowatt-hour installed, with projections indicating a further 40% cost reduction by 2030.

This report analyses the cost of lithium-ion battery energy storage systems (BESS) within Europe's grid-scale energy storage segment, providing a 10-year price forecast by both system and tier one components. An executive summary of major cost drivers is provided for reference, reflecting both.

The rapidly evolving landscape of utility-scale energy storage systems has reached a critical turning point, with costs plummeting by 89% over the past decade. This dramatic shift transforms the economics of grid-scale energy storage, making it an increasingly viable solution for Europe's renewable.

Over the next decade, the top 10 countries in Europe will add 73 GWh of energy storage, amounting to 90% of new deployments. Germany's current geography has restricted the possibility of new pumped storage capacity. This has led to the a mandatory switch to alternate storage technologies.

In today's volatile European energy market, understanding the complexities of battery energy storage system (BESS) and hybrid project pricing is crucial. The Q4 European Storage and Hybrid Pricing Market Transparency Report builds on our previous BESS reports and expands into the four most common.

"With energy storage, there's a new and interesting asset class emerging, and the business model is fundamentally different to that of wind and solar," says Ingmar Grebien, who leads GS Pearl Street and is a managing director in Goldman Sachs Global Banking & Markets. GS Pearl Street is a platform.

The European Energy Storage Market Monitor (EMMES) updates the analysis of the European energy storage market (including household storage, industrial storage and pre-metre storage) and forecasts until 2030. The report covers market access,

policy overview and market analysis in 14 countries.
