

# Reykjavik lead carbon energy storage power generation project

**FLEXIBLE SETTING OF  
MULTIPLE WORKING MODES**

## Overview

---

In Iceland, east of Reykjavik, a geothermal powerplant can be spotted in the rugged landscape. It has the ambition to become the first in the world with a near-zero carbon footprint by integrating CO2 capture, injection, and mineral storage.

In Iceland, east of Reykjavik, a geothermal powerplant can be spotted in the rugged landscape. It has the ambition to become the first in the world with a near-zero carbon footprint by integrating CO2 capture, injection, and mineral storage.

Government organisation Sustainable Iceland. The strategy highlights Iceland's goal to be an international leader in geothermal, renewable energy and CCUS. It outlines how Iceland can meet the United Nations 2030 Sustainable Development Goals (SDGs), and Iceland's geothermal power plant in Iceland.

In Iceland, east of Reykjavik, a geothermal powerplant can be spotted in the rugged landscape. It has the ambition to become the first in the world with a near-zero carbon footprint by integrating CO2 capture, injection, and mineral storage. The Silverstone project uses Carbfix, a mineralisation.

Lauded as the world's largest operational system for carbon capture and storage, the Orca plant in Iceland has been up and running since 8 September 2021. Named for the Icelandic word 'orka' meaning 'energy', the plant combines the capture of carbon dioxide (CO<sub>2</sub>) from the atmosphere, facilitated.

The project comprises the expansion and refurbishment of existing geothermal power plants and the extension and renovation of the district heating and electricity distribution networks in the Reykjavik area during 2025-2029. In line with the EU and national energy policies, the project will ensure.

Nestled in the world's northernmost capital, the Reykjavik Energy Storage Project is rewriting the rules of sustainable energy. With Iceland already sourcing 85% of its energy from renewables like geothermal and hydropower, you might wonder: why does it need a massive storage initiative?

The answer.

Carbfix (carbon capture and storage). Nearly half of the proceeds will be attributed

to the renewable energy project category, and around one third to the energy distribution infrastructure and management project category. The remaining share of proceeds is expected to be attributed to sustainable.
