

Rwanda solar energy storage project

Overview

According to the government's Least Cost Power Development Plan (2024–2050), Rwanda plans to add approximately 1,500 MW of solar PV capacity by 2050, complemented by energy storage systems.

According to the government's Least Cost Power Development Plan (2024–2050), Rwanda plans to add approximately 1,500 MW of solar PV capacity by 2050, complemented by energy storage systems.

Rwanda is accelerating its solar power development, aiming to provide electricity to every household nationwide by 2030. The government plans to invest \$16 billion in the solar sector. Currently, 82% of Rwandan households have access to electricity: 57% are connected to the national grid, while 25%.

Rwanda's electricity demand is projected to triple by 2030 [1], while the country aims to achieve 60% renewable energy penetration within the same timeframe. But here's the rub: Solar and wind power generation in the region fluctuates by up to 70% daily [2], creating what engineers call the "duck.

Sawa Energy has secured a significant EUR 2.5 million equity investment from ElectriFI to expand its solar energy and battery energy storage system (BESS) projects in Rwanda and Uganda. This strategic funding is designed to accelerate the replacement of diesel generators with clean, reliable solar.

With 82% of households already connected to electricity and a goal to reach 100% by 2030, Rwanda's plan to add 1,500 MW of solar capacity by 2050 is redefining what energy sovereignty means for Africa. Behind this pursuit lies a determination to prove that clean, sustainable power is not a

to renewable energy projects. These mostly include hydro projects (MHPP 33MW, HPP 133MW approximately 5 hours per day. Rwanda's Total on-grid installation in over 40 smaller sites. Medium Hydropower Nyabarongo II (43.5MW) is a multipurpose project expected to cater for water supply, irrigation as well a.
