

Safety Comparison of 25kW Lead-Acid Battery Cabinets in Latin America

Overview

Batteries play a critical role in our lives. However, depending on their chemical compositions and contents, they may turn into serious threats for both humans and the environment. Misuses and high temperatures.

What is a vented lead acid battery?

Vented lead acid: This group of batteries is “open” and allows gas to escape without any positive pressure building up in the cells. This type can be topped up, thus they present tolerance to high temperatures and over-charging. The free electrolyte is also responsible for the facilitation of the battery’s cooling.

What are the safety requirements for a lead accumulator?

ENERPOWER has developed a project that adapts to the safety criteria referred to by the current legislation CEI 21-6 / December 1990 for the installation of lead accumulators. Adequate natural ventilation (in the charging conditions indicated by ENERPOWER).

Which accumulator batteries are included in the cabinets covered by the technical specification?

The cabinets covered by the technical specification have been designed to contain the hermetic lead-acid electric accumulator batteries.

Is lead a carcinogen?

Lead is classified as a Group 2B carcinogen. There is no proof of carcinogenicity in humans (lacking data). However, it is known that it can be carcinogenic to animals at extreme doses. This battery type contains heavy metals, such as lead. Heavy metals can be taken into the human body primarily by inhalation and ingestion.
