

Shopping mall uses pv distributions for bidirectional charging

Overview

What is bidirectional charging?

Bidirectional charging allows an electric vehicle to both charge its battery from the electrical grid and discharge energy back to the grid or another electrical system. This capability will not only enable emergency backup power for homes and businesses but also allow users to alleviate grid strain and reduce energy costs.

Does bidirectional charging add storage capacity?

Given the right energy management solutions, bidirectional charging, or V2X, could add significant storage capacity for these systems. In addition, pairing a V2X system with stationary batteries can improve overall system efficiency and provide a more seamless transition of the home to backup mode.

Will bidirectional charging increase solar storage capacity?

Solar-plus-storage system adoption is rising, particularly in California and Hawaii, driven by net metering policy changes encouraging energy self-consumption. Given the right energy management solutions, bidirectional charging, or V2X, could add significant storage capacity for these systems.

Is bidirectional charging a good option for high-value use cases?

In addition to the scale of storage capacity available, bidirectional charging is highly versatile, supporting high-value use cases including: Automakers like Toyota, Hyundai, Nissan, and Ford are among the key players today, but many others have announced upcoming releases.
