

# Solar battery cabinet prices fall

## Overview

---

Will battery storage prices fall again in 2025?

Battery storage costs have fallen dramatically over the past two years, and the decline continues. Following a steep decline in 2024, Ember's analysis indicates that prices continued to fall sharply again in 2025.

How much does solar storage cost?

Ember estimates that if half of daytime solar generation is shifted to nighttime, the \$65/MWh storage cost adds about \$33/MWh to the cost of solar electricity. With the global average price of solar at \$43/MWh in 2024, adding storage would bring the total cost to about \$76/MWh, delivering power in a way that better matches real demand.

How much does battery storage cost in 2024?

BNEF's Levelized Cost of Electricity report indicates that the global benchmark cost for battery storage projects fell by a third in 2024 to \$104 per megawatt-hour (MWh), as a glut in supply due to slower electric vehicle sales led to cheaper prices for battery packs.

How much does battery storage cost?

A new analysis from energy think tank Ember shows that utility-scale battery storage costs have fallen to \$65 per megawatt-hour (MWh) as of October 2025 in markets outside China and the US. At that level, pairing solar with batteries to deliver power when it's needed is now economically viable.
