

# Solar power generation system installed in south america

## Overview

---

Does South America have a photovoltaic solar system?

Just as with EV adoption, photovoltaic solar deployment varies greatly in South America: some countries have just started deploying it, while others have made it a core part of their systems for nearly a decade. But all (or at least most) are advancing rapidly towards its massive deployment.

How many solar power plants are there in South America?

As of 2023, there is only one tower concentrated solar power (CSP) facility in operation in the South American region, located in the Atacama Desert region in Chile, with a total installed capacity of 110 MW and a time of stored energy in the form of heat equivalent to 17.5 h.

Can large solar PV facilities be implemented in Latin America?

In that sense, it is possible to implement large solar PV facilities in the region. Figure 29 shows a mapping of the future installed capacity for each of the nations in the Latin American region. Figure 29. Mapping of future facilities considering installed capacity in Latin America.

Is solar energy a viable alternative to electricity in South America?

In this way, the implementation of facilities for the generation of electrical energy through clean energy sources has been developed, with solar energy being one of the most attractive alternatives in the region. Table 9 shows a ranking of the countries in South America according to the criterion of installed capacity (MW).

## Solar power generation system installed in south america
