

South Korean energy storage cabinet 40kWh commissioning

Overview

Will South Korea install 540 megawatts of battery energy storage systems?

The Ministry of Trade, Industry and Energy unveiled plans for a nationwide tender to install 540 megawatts of battery energy storage systems (BESS), marking the country's first major government-led deployment of its kind. The project is part of a broader effort to modernize South Korea's power grid and support the transition to renewable energy.

Why is South Korea launching the ESS central contract market auction?

The South Korean government, under the auspices of its carbon neutrality and energy transition goals, has launched the 2025 1st ESS Central Contract Market auction, marking an evolution in the country's battery energy storage system strategy. South Korea has committed to increasing renewable energy capacity while maintaining grid stability.

Are South Korean companies investing in energy storage systems?

Less than a decade ago, South Korean companies held over half of the global energy storage system (ESS) market with the rushed promise of helping secure a more sustainable energy future. However, a string of ESS-related fires and a lack of infrastructure had dampened investments in this market.

How many megawatts will be installed in South Korea?

Their importance is growing as renewable energy accounts for a larger share of South Korea's power supply. Of the planned total, 500 megawatts will be installed on the mainland, with the remaining 40 megawatts allocated to Jeju. The scale of this project is more than eight times that of the 65-megawatt pilot program launched in Jeju in 2023.
