

Suriname solar-powered communication cabinet wind power company

Overview

Is solar power more flexible than wind power in Suriname?

However, two factors lead us to conclude that in Suriname's specific case, wind power is a more obvious candidate to be supported by hydro-driven flexibility than solar power.

Can Suriname support a grid integration of wind power?

Suriname's hydropower plant can support substantial grid integration of wind power. Thermal power could be cost-effectively displaced by hydro-supported wind power. Suriname could, on average, reach 20%–30% penetration of hydro-supported wind power. Such strategies could benefit various island states and regions with isolated grids.

Could a new wind turbine be installed in Suriname?

As potential wind turbine deployment in Suriname would presumably happen in stages, the costs for each consecutive project could realistically be lower than for preceding projects as technology progresses and wind turbines with higher hubs (reaching higher capacity factors) become cheaper, allowing for penetration rates potentially beyond 30%.
