Overview

What is a PV combiner box?

A PV combiner box combines multiple strings of solar panels into one main output circuit. It's essential for any solar installation with multiple strings as it provides overcurrent protection, surge protection, and circuit isolation, ensuring the safety and efficiency of your solar system.

What is a solar combination box?

A Solar Combiner Box is an essential component in solar power systems that combines multiple strings of solar panels into one main output circuit. It provides critical protection functions including overcurrent protection, surge protection, and circuit isolation, ensuring the safety and efficiency of your solar installation.

What types of solar combiner boxes are available?

We offer a variety of solar combiner boxes, including DC and AC. DC combiner boxes cover 1-24 input channels, support 600V/1000V/1500V system voltage, and current range 10A-400A. AC combiner boxes support low-voltage and medium-voltage applications.

What is a letop solar combiner box?

LETOP offers multiple series of solar combiner boxes, with each series specifically designed for specific installation conditions and common layouts. No matter under what conditions your solar project is used, it will become easier and more efficient. 600V DC combiner box is LETOP's economical solution designed for small PV systems.
