

Vat rate for chemical energy storage projects

Overview

These businesses will no longer be required to charge and account for VAT from 1 February 2024 until 31 March 2027 and, subsequently, will only have to account for the reduced rate of 5 per cent on their supplies.

These businesses will no longer be required to charge and account for VAT from 1 February 2024 until 31 March 2027 and, subsequently, will only have to account for the reduced rate of 5 per cent on their supplies.

But when it comes to energy storage—a \$33 billion global industry generating 100 gigawatt-hours annually [1]—VAT (Value Added Tax) policies can make or break innovation. Imagine this: your solar-powered home battery could cost 20% less if lawmakers tweak a single tax clause. Who knew tax codes.

Most jurisdictions apply standard VAT rates to energy storage systems, but exceptions are emerging: The VAT treatment often hinges on energy storage capacity thresholds. Italy's "Super Bonus 110%" scheme applies different rates based on: When Sweden introduced a 12% VAT reduction for grid-scale.

The Government has extended the VAT zero rate to a wider range of energy-saving materials. It is a welcome move for those wishing to buy and install battery storage, heat pumps groundworks and for charities. The Government first announced the extension of the VAT zero rate to key energy-saving.

2.1 The intention of the statutory instrument (SI) is to expand the Value Added Tax (VAT) relief for energy-saving materials (ESMs). The relief is currently set to a temporary zero rate of VAT which applies until 31 March 2027, and will revert to the reduced rate of VAT at 5 per cent from 1 April.

First published on 25 Jan 2024, and most recently revised on 25 Feb 2025. When energy-saving materials (ESMs) are installed, a reduced VAT rate (5%) is usually applied. However, there is a temporary zero rate of VAT which applies until 31 March 2027, after which the rate will revert to the reduced.

In this installment of Andersen's Sodium Podium, the authors discuss the differing property tax and sales tax considerations regarding battery energy storage systems and examine the policies of four states in depth. Copyright 2023 Andersen

Tax LLC All rights reserved. Battery energy storage systems. What is the VAT rate for energy-saving materials (ESMs)?

Written by Louise Speke. First published on 25 Jan 2024, and most recently revised on 25 Feb 2025. When energy-saving materials (ESMs) are installed, a reduced VAT rate (5%) is usually applied. However, there is a temporary zero rate of VAT which applies until 31 March 2027, after which the rate will revert to the reduced rate.

Which energy-saving materials will have a zero VAT rate in 2024?

Following an extensive consultation, the Government confirmed that from 1 February 2024 the zero rate of VAT will now apply. The installation of certain energy-saving materials (ESMs) in residential accommodation has long enjoyed a zero VAT rate. This preferential VAT rate applied to the more common ESMs including: Wind and water turbines.

When will the VAT zero rate apply to energy-saving materials?

The Government first announced the extension of the VAT zero rate to key energy-saving materials in its Spring 2023 Budget. Following an extensive consultation, the Government confirmed that from 1 February 2024 the zero rate of VAT will now apply.

How will VAT relief impact the energy storage industry?

With VAT relief, installers can offer more competitive pricing, potentially leading to increased demand for energy storage solutions. This, in turn, could drive technological advancements and create job opportunities within the energy storage sector.
