

# Will hamburg germany reform its wind and solar storage system

## Overview

---

Ensuring “acceleration zones,” wind and solar PV parks, and energy storage projects, Germany's federal cabinet on Wednesday approved a draft law aimed at shortening the project approval process, a move that fulfills the requirements of the European Union's 2023 Renewable.

Ensuring “acceleration zones,” wind and solar PV parks, and energy storage projects, Germany's federal cabinet on Wednesday approved a draft law aimed at shortening the project approval process, a move that fulfills the requirements of the European Union's 2023 Renewable.

From 2022 to 2023, Germany saw installations of new wind and solar power nearly double, a shift driven in part by sweeping changes to simplify permitting for clean energy projects. With war raging in Ukraine, imports of Russian gas have dwindled, forcing Europe to quickly ramp up its buildout of.

Expanding renewables is key to reaching climate neutrality and will require significant investment in the coming years. In view of aligning Germany's renewables support system with EU rules, an Agora study shows how a combination of public and market-based financing can help secure wind and solar.

Hamburg, a German city and federal state, is pioneering renewable energy legislation in the buildings sector, including by mandating the installation of solar panels on new buildings from 2023 and on roof renovations from 2024. The amendment of Hamburg's Climate Protection Act reinforces the city's.

Preparing for the upcoming OnWIND – Onshore Wind Energy, which will take place on 2/3 June 2026 in Hamburg, The Voice of Renewables prepared this report on current state and outlook on onshore wind repowering in Germany. Germany is entering a new phase in its energy transition, with onshore wind.

Acceleration areas and shortened approval procedures are intended to ensure faster expansion of wind and solar parks as well as energy storage at the same locations. The move implements requirements from the EU Renewable Energy Directive of 2023. Approvals will also be facilitated for electrolyzers.

To this end, all the potential of renewable energies is to be utilized: Solar and wind

energy, bioenergy, hydropower, geothermal energy, climate-neutral molecules and storage capacities. Climate-neutral molecules are solid, liquid and gaseous energy sources that are used in particular in sectors.
